

DIFFUSE

METAL HALIDE KITS

Diffuse fixture with (4) metal halide bulbs inside.

Reduce glare and light pollution and provide 360-degree lighting with new diffuse metal halide conversion kits. One light kit provides coverage for up to 160,000 ft² (14,864 m²), while reducing the unpleasant glare produced by traditional metal halide floodlight fixtures.

360° LIGHT COVERAGE

Compared to the directional lights of traditional light tower fixtures, diffuse light kits distribute light evenly from the light tower- a full 360-degrees.

APPLICATIONS

- Road Construction
- Oil Field Operations
- Applications requiring 360-degree lighting
- Applications requiring reduced-glare lighting

EASY INSTALLATION

The diffuse light fixture kit installs in a matter of minutes, minimizing downtime and labor costs. All hardware needed for the installation is included, with no welding required. Wiring is equally convenient. The diffuse light fixture uses four (4) 1000-1250 watt metal halide bulbs, with no need to modify or bypass breakers or ballasts.

(Horizontal Mast)

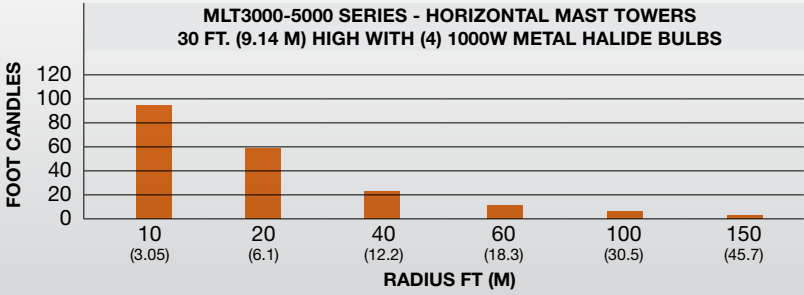

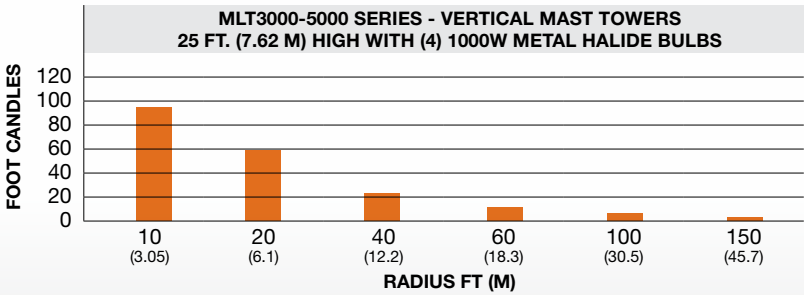

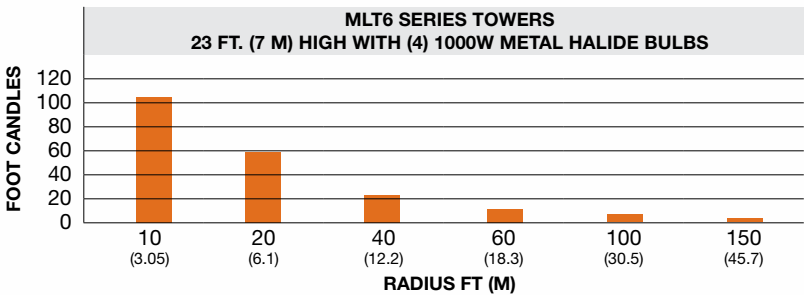

SPECIFICATIONS

Additional options available

	SPECIFICATIONS
Maximum Lumens Output	600,000
Maximum Watt Output	5000
Lamp Type	BT37
Lamp Socket Type	E39 - (4) Sockets

DURABLE

The rigid aluminum frame is very durable and lightweight, with a polymer lens designed to withstand all weather conditions. The impact resistant polymer material is robust and long-lasting, as compared to traditional glass lenses and fabric balloon lighting solutions.
