

Submersible Sewage Pumps  
**Vortex Impeller**  
**UT / UTZ**

## Compact Economical Cast Iron Pumps

### Economical

The UT / UTZ Series is an economical version of the Tsurumi U Series, semi-vortex submersible pumps. It is designed for a wide range of applications.

### Large Diameter Passage

The pump has a large passage that makes it ideal for liquid containing various solids.

### Available in Automatic Operation

Automatic version equipped with floats.

# NEW

### Applications

- Transferring wastewater between storage tanks
- Draining sewage from factories, home residences, hotels, restaurants, etc.
- Pumping water run-off containing solids.

## Features

### Anti-wicking Cable Entrance

Maximum protection against water incursion through the cable entry.

### Motor Protector

A built-in thermal motor protection device reacts to the heat caused by overcurrent or run-dry conditions by shutting down the motor circuit automatically. When the motor cools down to a safe operating temperature, the motor restarts.

### Dual Inside Mechanical Seal

The dual inside mechanical seal (dual face mechanical seal located in an oil bath) is incorporated in all pumps. As both top and bottom sealing faces are lubricated by the oil, it ensures a longer life of the product and a stable sealing effect.

### Oil Lifter (Patented)

Tsurumi's exclusive Oil Lifter encloses the mechanical seal and uses the centrifugal force generated by the rotating shaft and seal to pump oil to the upper seal faces. Upper and lower seal faces are positively lubricated even when extremely low oil levels exist, as experienced after long periods of extended operation.

### Automatic Operation with Float Switch

(50UTZ2.4S & 50UTZ2.75S)

The pump operates a float switch for automatic operation to prevent dry running and lower power consumption.

## Major Standard Specifications

Discharge Size		2 inches (50mm)		
Pumping Fluid	Type of Fluid	Sewage, Wastewater, and Liquid carrying Waste and Solid Matters		
	Fluid Temperature	32 to 104°F (0 to 40°C)		
Pump	Structure	Impeller	Vortex	
		Shaft Seal	Double Mechanical Seal (with Oil Lifter)	
		Bearing	Double-shielded Ball Bearing	
	Materials	Impeller	Glass-fiber Reinforced Resin	
Casing		Gray Cast Iron		
	Shaft Seal	Silicon Carbide		
Motor	Type, Pole	Dry Type Submersible Induction Motor, 2-pole		
	Insulation	Class E		
	Phase	Single-phase		
	Starting Method	Capacitor Run		
	Protection Device (Built-in)	Circle Thermal Protector Miniature Thermal Protector (50UT2.4S only)		
	Lubricant	Turbine Oil (ISO VG32)		
	Materials	Frame	Gray Cast Iron	
		Shaft	403 Stainless Steel	
		Cable	PVC	
	Float Switch	Housing	Polypropylene Resin	
Cable		Chloroprene Rubber		
Discharge Connection		Screwed Flange

## UT- SERIES SEWAGE & WASTEWATER PUMPS

## SAMPLE SPECIFICATIONS

### 1. SCOPE OF SUPPLY -

Furnish and install TSURUMI Model \_\_\_\_\_ Submersible Pump(s). Each unit shall be capable of delivering \_\_\_\_\_ GPM (\_\_\_\_\_ m<sup>3</sup>/min) at \_\_\_\_\_ Feet (\_\_\_\_\_ m) TDH. The pump(s) shall be designed to pump waste water, sewage or effluent containing \_\_\_\_\_ inch (\_\_\_\_\_ mm) diameter solids without damage during operation. The pump(s) shall be designed so that the shaft power required (BHP)/(kW) shall not exceed the motor rated output throughout the entire operating range of the pump performance curve. The pump discharge size shall be \_\_\_\_\_ inch, (\_\_\_\_\_ mm).

### 2. MATERIALS OF CONSTRUCTION -

Construction of major parts of the pumping unit(s) including pump casing and motor casing shall be manufactured from gray cast iron, ASTM A48 CLASS 30B. Impeller shall be manufactured from a recyclable, application appropriate resin, and shall be of the multi-vane, semi-vortex, solids handling design which is slip fit onto the shaft. Motor shaft shall be machined to provide a positive drive of the impeller. Internal and external cast iron surfaces coming into contact with the pumpage shall be protected by a fused polymer coating. All exposed fasteners shall be stainless steel.

### 3. MECHANICAL SEAL -

All units shall be furnished with a dual inside mechanical shaft seal located completely out of the pumpage, running in a separate oil filled chamber and further protected by an exclusionary oil seal located between the bottom seal faces and the fluid being pumped. Unit shall be fitted with a device that shall provide positive lubrication of top mechanical seal, (down to one third of the standard oil level). The device shall not consume any additional electrical power. Mechanical seals shall be rated to preclude the incursion of water up to 42.6 PSI. (98.4 Ft.). Units shall have silicon carbide mechanical seal faces. Mechanical seal hardware shall be stainless steel. A rubber V-ring and stainless steel shaft sleeve shall provide additional protection of the mechanical seal and motor shaft from abrasives and debris.

### 4. MOTOR -

The pump motor(s) shall be \_\_\_\_\_ Hp., \_\_\_\_\_ kW., \_\_\_\_\_ V., 60 Hz., \_\_\_\_\_ Phase and shall be NEMA MG-1, Design Type B equivalent. Motor(s) shall be rated at \_\_\_\_\_ full load amps. Motor(s) shall have a 1.15 service factor and shall be rated for 20 starts per hour. Motor(s) shall be air filled, copper wound, class E, B, or F insulated with built in thermal protection for each winding. Motor shaft shall be 420 or 403 stainless steel and shall be supported by two permanently lubricated, high temperature ball bearings, with a B-10 life rating at best efficiency point of 60,000 hours. The bottom bearing shall be single row, double shielded, C3, deep groove type ball bearings. The top bearing shall be single row, double shielded, C3, deep groove type ball bearings. Motor housing and bearing housing shall be gray cast iron, ASTM A48 CLASS 30B.

### 5. POWER CABLE AND CABLE ENTRANCE -

The pump power cable shall be suitable for submersible pump applications. Units shall be supplied with a cable entrance that incorporates built in strain relief, a one piece, three way mechanical compression seal with a fatigue reducing cable boot. The power cable shall be field replaceable. The cable entrance assembly on all units shall contain an anti-wicking block to eliminate water incursion into the motor due to capillary wicking should the power cable be accidentally cut.
